AJC-14209

The compound N -(2-carboxyphenyl)-exo-7-oxa-bicyclo[2,2,1] hept-5-ene-2,3-dicarboximide $\left(\mathrm{C}_{15} \mathrm{H}_{11} \mathrm{NO}_{5}, \mathrm{M}_{\mathrm{r}}=285.25\right)$ was synthesized and characterized by elemental analysis, ${ }^{1} \mathrm{H}$ NMR spectra, IR spectra and single crystal X-ray diffraction. The crystal belongs to monoclinic, space group $\mathrm{P} 21 / \mathrm{n}$, with $\mathrm{a}=8.4994(8), \mathrm{b}=14.6499(15), \mathrm{c}=10.2880(10) \AA, \beta=101.5890(10)^{\circ}, \mathrm{V}=1254.9(2) \AA^{3}, \mathrm{Z}=4, \mathrm{D}_{\mathrm{c}}=1.510 \mathrm{~g} /$ $\mathrm{cm}^{3}, \lambda=0.71073 \AA,\left(\mathrm{MoK}_{\alpha}\right)=0.115 \mathrm{~mm}^{-1}, \mathrm{~F}_{(000)}=592$. The final refinement gave $\mathrm{R}=0.0374$, $\mathrm{wR}\left(\mathrm{F}^{2}\right)=0.0856$ for 2,201 observed reflections with $\mathrm{I}>2 \sigma(\mathrm{I})$. The structure of the compound comprises a racemic mixture of chiral molecules containing four stereogenic centres. X-Ray diffraction analysis reveals that the cyclohexane ring tends towards a boat conformation, the tetrahydrofuran ring and the dihydrofuran ring adopt envelope conformations. The dihedral angle between the pyrrolidine-2,5-dione plane and the aromatic ring is $65.0(1)^{\circ}$. The crystal structure is stabilized by $\mathrm{O}-\mathrm{H} \cdots \mathrm{O}$ and $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bonds.

Key Words: N-(2-Carboxyphenyl)-exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboximide, Synthesis.

## INTRODUCTION

The imide moiety is an integral structural part of various important bioactive molecules such as fumaramidmycin, granulatimide, isogranulatimide and rebeccamycin. These molecules are reported to exhibit antitumor, antiinflammatory and antimicrobial activities ${ }^{1-3} \cdot 7$-Oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboxylic anhydride has been widely employed in clinical practice, as it is less toxic and much easier to be synthe-sized ${ }^{4,5}$. Its derivatives are also pharmacologically active ${ }^{6}$. Furthermore, 7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboximide and its N -substituent compounds have recently become an intense research topic in heterocyclic chemistry because of their antitumor, antivirus, analgesic, sedative and fungicidal activities ${ }^{7}$. In the previous work, N -phenyl-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboximide was synthesized and its structure was characterized ${ }^{8}$.

In this paper, the title compound N -(2-carboxyphenyl)-exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboximide was synthesized and its molecular structure was investigated by elemental analysis, ${ }^{1} \mathrm{H}$ NMR spectra, IR spectra and X-ray crystallographic techniques.

## EXPERIMENTAL

Infrared absorption spectra were obtained from a Nicolet NEXUS 670 FT-IR spectrometer in KBr discs and were
reported in $\mathrm{cm}^{-1}$ units. ${ }^{1} \mathrm{H}$ NMR spectra were determined on a Bruker DRX-400 NMR spectrometer with TMS as internal standard in DMSO- $d_{6}$. Carbon, nitrogen and hydrogen analyses were performed on an elemental analysensteme GmbH Vario EL analyzer. Furan, maleic anhydride and $o$-aminobenzoic acid were purchased from Weifang Runze (China). All other chemicals used in this work were of analytical grade.

The synthesis of exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3dicarboxylic anhydride was followed from literature ${ }^{8,9}$.

A mixture of exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboxylic anhydride ( $0.332 \mathrm{~g}, 2 \mathrm{mmol}$ ) and $o$-aminobenzoic acid $(0.274 \mathrm{~g}, 2 \mathrm{mmol})$ in methanol $(5 \mathrm{~mL})$ was stirred for 5 h at room temperature and then refluxed for 1 h . After cooling the precipitate was filtered and dried, the title compound was obtained. Yield: $82 \%$. m.p. $158.3-158.9^{\circ} \mathrm{C}$. The crude product of 20 mg was dissolved in methanol of 10 mL . The solution was filtered to remove impurities and then the filtrate was left for crystallization at room temperature. The single crystal suitable for X-ray determination was obtained by evaporation from the methanol solution after 5 days.

Anal. calcd. (\%) for $\mathrm{C}_{15} \mathrm{H}_{11} \mathrm{NO}_{5}$ : C 63.15, H 3.86, N 4.91. Found (\%): C 63.06, H 4.97, N 5.01. Selected IR (KBr) data $\left(\mathrm{cm}^{-1}\right): 3075$ (A r-H), 1775, $1683(\mathrm{C}=\mathrm{O}), 1600(\mathrm{C}=\mathrm{C}), 1197$ (C-O-C), 718 (=C-H). ${ }^{1} \mathrm{H}$ NMR (DMSO- $\left.d_{6}, \mathrm{ppm}\right) \delta: 8.05$ (d, $1 \mathrm{H}, \mathrm{ArH}$ ), 7.78 (d, 1H, ArH), 7.58 (dd, 1H, ArH), 7.14 (dd,
$1 \mathrm{H}, \mathrm{ArH}), 5.87\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{13} \mathrm{H}, \mathrm{C}_{14} \mathrm{H}\right), 4.73\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{12} \mathrm{H}, \mathrm{C}_{15} \mathrm{H}\right)$, $3.10\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{10} \mathrm{H}, \mathrm{C}_{11} \mathrm{H}\right)$.

Data collection and structure determination: A single crystal X-ray data of title compound was collected on a Bruker SMART diffractometer with a graphite monochromatized $\mathrm{MoK}_{\alpha}$ radiation $(\lambda=0.71073 \AA)$. The structure was solved by SHELXS-97 and refined with SHELXL-97 ${ }^{10}$. The positions of the H atoms bonded to C atoms were calculated ( $\mathrm{C}-\mathrm{H}$ distance $0.96 \AA$ ) and refined using a riding model. The H atom displacement parameters were restricted tobe $1.2 \mathrm{U}_{\mathrm{eq}}$ of the parent atom. The details of the X-ray data collection, experimental conditions and structure solution and structure refinements are given in Table-1. Some selected bond distances and angles are listed in Table-2. The molecular structures with the atomnumbering scheme are shown in Fig. 1. CIF file containing complete information on the studied structure was deposited with CCDC, deposition number 775724 and is freely available upon request from the following web site: www.ccdc.cam.ac.uk/data_request/cif.

## RESULTS AND DISCUSSION

Furan reacts in a Diels-Alder reaction with maleic anhydride in tetrahydrofuran at room temperature to give exo -7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboxylic anhydride as shown in Scheme-I.

Scheme-I: Synthesis of exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3dicarboxylic anhydride

The condensation reaction between exo-7-oxa-bicyclo-[2,2,1]hept-5-ene-2,3-dicarboxylic anhydride and $o$-aminobenzoic acid proceeded smoothly in methanol at room temperature for 5 h and refluxed temperature for 1 h , respectively, leading to the title compound in high yield (SchemeII). The elemental analysis, IR spectra and ${ }^{1}$ H NMR data clearly indicated that the condensation reaction between exo-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3- dicarboxylic anhydride and $o$ aminobenzoic acid in a ratio of 1:1.

Scheme-II: Synthesis of the title compound
The structure of the title compound, $\mathrm{C}_{15} \mathrm{H}_{11} \mathrm{NO}_{5}$, comprises a racemic mixture of chiral molecules containing four stereogenic centres. As seen from Fig. 1, the cyclohexane ring tends towards a boat conformation and the tetrahydrofuran ring and the dihydrofuran ring adopt envelope conformations. The dihedral angle between the pyrrolidine-2,5-dione plane
and the aromatic ring is $65.0(1)^{\circ}$. As seen from Table-2, the bond lengths and bond angles are as expected. And they are comparable to those in the similar compounds ${ }^{10,11}$. In 7 - oxabicyclo( $2,2,1$ )hept-5-ene-2,3-dicarboximide group, the C-C bonds lengths [1.495(3)1.573(3) Å], except C13-C14 double bond length $[1.316(3) \AA$ ] , are longer than the normal single bond length. The degree of lengthening of the C - C bonds in the title compound is in good agreement with that of corresponding C-C bonds in N-phenyl-7-oxa-bicyclo[2,2,1]hept-5-ene-2,3-dicarboximide ${ }^{8}$, N-methyl-7-oxabicyclo(2,2,1)hept-5-ene-2,3-exo-dicarboximide ${ }^{11}$ and exo-4-[(4-bromophenyl) amino]-10-oxa-4-azatricyclo( $5,2,1,0^{2,6}$ ) dec-8-ene-3,5-dine ${ }^{12}$. The crystal structure is stabilized by O-H $\cdots \mathrm{O}$ and $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ intermolecular hydrogen bonds (Fig. 2 and Table-3). The existence of the benzene ring is great helpful to forming a strong $\pi-\pi$ stacking interactions ${ }^{13}$.
